### Intended Use

Spectrum liquizyme ALT reagent is intended for the in-vitro quantitative, diagnostic determination of ALT in human serum on both automated and manual systems.

## **Background**

The enzyme alanine aminotransferase ALT is widely distributed with high concentrations in the liver and to a lesser extent in kidneys, heart, skeletal muscles, pancreas and lungs. Elevated serum ALT is found in hepatitis, cirrhosis, obstructive jaundice, liver carcinoma and chronic alcohol abuse. ALT is only slightly elevated in patients who have an uncomplicated myocardial infarction. Although both serum aspartate aminotransferase AST and ALT become elevated whenever disease processes affect liver cell integrity, ALT is the more liver specific enzyme. Moreover, elevations of ALT activity persist longer than elevations of AST activity.

### Method

Kinetic method according to the International Federation of Clinical Chemistry (IFCC)  $^{(3)}$ .

# **Assay Principle**

The series of the reaction involved in the assay system is as follows:

1. The amino group is enzymatically transferred by ALT present in the sample from alanine to the carbon atom of 2-oxoglutarate yielding pyruvate and L-glutamate.

Pyruvate + L-Glutamate L-Alanine + 2-Oxoglutarate \_ ALT

Pyruvate is reduced to lactate by LDH present in the reagent with the simultaneous oxidation of NADH to nicotinamide adenine dinucleotide (NAD). The reaction is monitored by measuring the rate of decrease in absorbance at 340 nm due to the oxidation of

Pyruvate + NADH + H<sup>+</sup> LDH L-Lactate + NAD<sup>+</sup>

3. Endogenous sample pyruvate is rapidly and completely reduced by LDH during the initial incubation period so that it does not interfere with the assav.

Sample pyruvate + NADH + H<sup>+</sup> LDH L-Lactate+ NAD<sup>+</sup>

# Reagents

Reagent 1 (R1 Buffer / Enzyme)

| Tris buffer (pH 7.4) | 100    | mmol/L |
|----------------------|--------|--------|
| L- Alanine           | 800    | mmol/L |
| LDH                  | ≥ 2000 | U/L    |
| Sodium Azide         | 8      | mmol/L |
|                      |        |        |

Reagent 2 (R2 Coenzyme) NADH

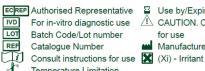

≥ 0.18 mmol/L 2 - Oxoglutarate Sodium Azide 8 mmol/L For further information, refer to the Alanine aminotransferase reagent material safety data sheet.

# **Precautions and Warnings**

Do not ingest or inhalate. In case of contact with eyes or skin; rinse immediately with plenty of soap and water. In case of severe injuries; seek medical advice immediately.

Both reagents (R1) and (R2) contain sodium azide which may react with copper or lead plumbing.

### SYMBOLS IN PRODUCT LABELLING

For in-vitro diagnostic use Batch Code/Lot number

AUTION. Consult instructions for use Manufactured by

Temperature Limitation

# Reagent preparation

Prepare working solution as following:

| REF:292 000 : add 4 ml from R2 to one bottle of R1; mix gently      |  |
|---|--|
| REF:292 001: add 4 ml from R2 to one bottle of R1; mix gently.      |  |
| REF:292 002 : add 2 ml from R2 to one bottle of R1; mix gently.     |  |
| REF:292 003 : add 4 ml from R2 to one bottle of R1; mix gently.     |  |
| REF:292 004 : add one bottle of R2 to one bottle of R1; mix gently. |  |
| REF:292 005 : add 4 ml from R2 to one bottle of R1; mix gently.     |  |
| REF:292 006: add one bottle of R2 to one bottle of R1; mix gently.  |  |
| REF:292 007 : add one bottle of R2 to one bottle of R1;mix gently.  |  |
| REF:292 008: add one bottle of R2 to one bottle of R1; mix gently.  |  |
| REF:292 009 : add one bottle of R2 to one bottle of R1; mix gently. |  |
|   |  |

Or prepare the working solution according to the number of tests required by mixing 4 volumes of reagent 1 (R1) and 1volume of reagent 2 (R2), e.g. 400 µl R1 + 100 µl R2.

## Reagent Storage and Stability

All reagents are stable until expiration date stated on label when stored refrigerated at 2 - 8 °C. Once opened, the reagent is stable for 2 months at the specified temperature. Working solution is stable for 4 weeks at 2 – 8 °C or 2 days at 15 -

25 °C.

## Deterioration

Do not use liquizyme ALT reagent if it is turbid or if the absorbance of the working reagent is less than 1.0 at 340 nm. Failure to recover control values within the assigned range may be an indication of reagent deterioration.

# **Specimen Collection and Preservation**

Use nonhemolyzed serum or plasma. Heparin and EDTA are the only acceptable anticoagulants; avoid other anticoagulants. The

biological half-life of ALT in serum is 47 hours. **Stability:** 3 days at 15 - 25 °C or 7 days at either 4-8 °C or at -20 °C

# **System Parameters**

Wavelength 340 nm (334 - 365 nm) Optical path 1 cm Kinetic Assav type Direction decrease Sample: Reagent Ratio 1:10 1 ml 100 μl 37 °C or 30 °C e.g .: Reagent volume Sample volume Temperature Equilibration time 60 seconds. Read time 1 to 3 minutes Zero adjustment Against air Low 1.00 AU High 2.5 AU 5 U/L Reagent Blank Limits Sensitivity 400 U/L Linearity

# **Procedure**

|                  | Macro  | Semi-Micro |  |
|------------------|--------|------------|--|
| Working solution | 1.0 ml | 500 μΙ     |  |
| Specimen         | 100 μΙ | 50 μΙ      |  |

Mix, read initial absorbance after 60 seconds and start timer simultaneously. Read again after 1, 2 and 3 minutes. Determine the mean absorbance change per minute ( $\Delta A/min$ ).

## Calculation

To calculate the ALT/GPT activity use the following formula

# **Quality Control**

Normal and abnormal control serum of known concentrations should be analyzed with each run.

### **Performance Characterstics**

#### Precision

Within run (Repeatability)

|            | Level 1 | Level 2 |
|------------|---------|---------|
| n          | 20      | 20      |
| Mean (U/L) | 103     | 190     |
| SD         | 6.1     | 13      |
| CV%        | 5.92    | 6.84    |

Run to run (Reproducibility)

|            | Level 1 | Level 2 |
|------------|---------|---------|
| n          | 20      | 20      |
| Mean (U/L) | 107     | 188     |
| SD         | 10.8    | 16      |
| CV%        | 10.1    | 8.51    |

## **Methods Comparison**

A comparison between Spectrum ALT (4+1) reagent and a commercial reagent of the same methodology was performed on 200 human sera. A correlation of 0.983 was obtained.

# Sensitivity

When run as recommended, the minimum detection limit of this assay is 5.0 U/L.

## Linearity

The reaction is linear up to ALT concentration of 400 U/L; specimens showing higher concentration should be diluted 1+5 with physiological saline and repeat the assay (result×6).

# **Interfering Substances**

# Hemolysis

Erythrocyte contamination elevates results, since ALT activities in erythrocytes are 3 to 5 times higher than those in normal sera.

## Icterus

No significant interference.

Lipemic specimens may cause high absorbance flagging. Diluted sample is recommended.

# Anticoagulants

Citrate and fluoride inhibit the enzyme activity.

Calcium dobesilate and doxycycline HCL cause artificially low ALT values at the tested drug level.

# **Expected values**

| 37 °C | Females | up to 31 U/I | (up to 0.52 μKat/L) |
|-------|---------|--------------|---------------------|
|       | males   | up to 41 U/I | (up to 0.68 μKat/L) |
| 30 °C | Females | up to 22 U/I | (up to 0.37 μKat/L) |
|       | males   | up to 29 U/I | (up to 0.48 μKat/L) |

Temperature conversion factor is 1.32 (25  $\longrightarrow$  30  $^{\rm O}{\rm C})$  and 1.85 (25  $\longrightarrow$  37  $^{\rm O}{\rm C}$  )

Spectrum Diagnostics does not interpret the results of a clinical laboratory procedure; interpretation of the results is considered the responsibility of qualified medical personnel. All indications of clinical significance are supported by literature references.

# **Analytical Range**

5 - 400 U/L.

# **Waste Disposal**

This product is made to be used in professional laboratories. Please consult local regulations for a correct waste disposal. **S56:** dispose of this material and its container at hazardous or

special waste collection point.

\$57: use appropriate container to avoid environmental contamination. S61: avoid release in environment. refer to special instructions/safety data sheets.
